Recurrent Neural Network (RNN)

Example Application

Slot Filling

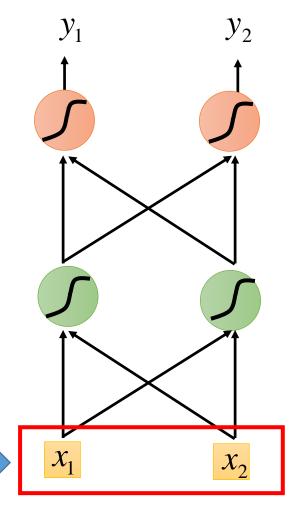

Example Application

Solving slot filling by Feedforward network?

Input: a word

(Each word is represented as a vector)

Taipei

1-of-N encoding

How to represent each word as a vector?

```
1-of-N Encodinglexicon = {apple, bag, cat, dog, elephant}The vector is lexicon size.apple = \begin{bmatrix} 1 & 0 & 0 & 0 & 0 \end{bmatrix}Each dimension correspondsbag = \begin{bmatrix} 0 & 1 & 0 & 0 & 0 \end{bmatrix}to a word in the lexiconcat = \begin{bmatrix} 0 & 0 & 1 & 0 & 0 \end{bmatrix}The dimension for the worddog = \begin{bmatrix} 0 & 0 & 0 & 1 & 0 \end{bmatrix}is 1, and others are 0elephant = \begin{bmatrix} 0 & 0 & 0 & 0 & 1 \end{bmatrix}
```

Beyond 1-of-N encoding

w = "Sauron"

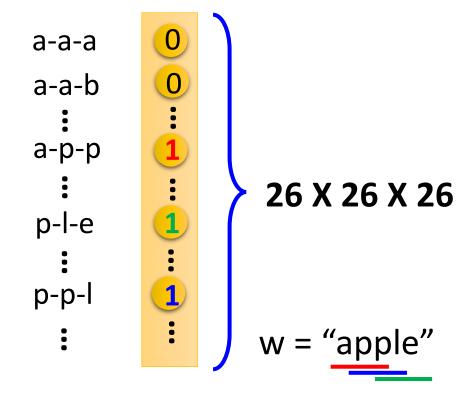

Dimension for "Other"

apple 0 0 0 cat 0 0 dog 0 0 elephant 0 •

"other"

w = "Gandalf"

Word hashing

Example Application

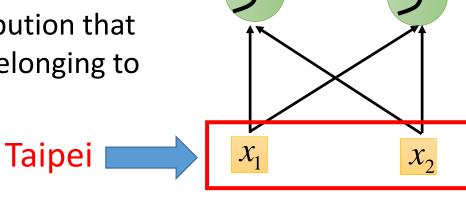

Solving slot filling by Feedforward network?

Input: a word

(Each word is represented as a vector)

Output:

Probability distribution that the input word belonging to the slots

dest

 y_1

time of

 y_2

departure

Example Application time of dest departure y_1 y_2 arrive 2nd Taipei November on other dest other time time Problem? 2nd **November** leave Taipei on place of departure Neural network Taipei X_2

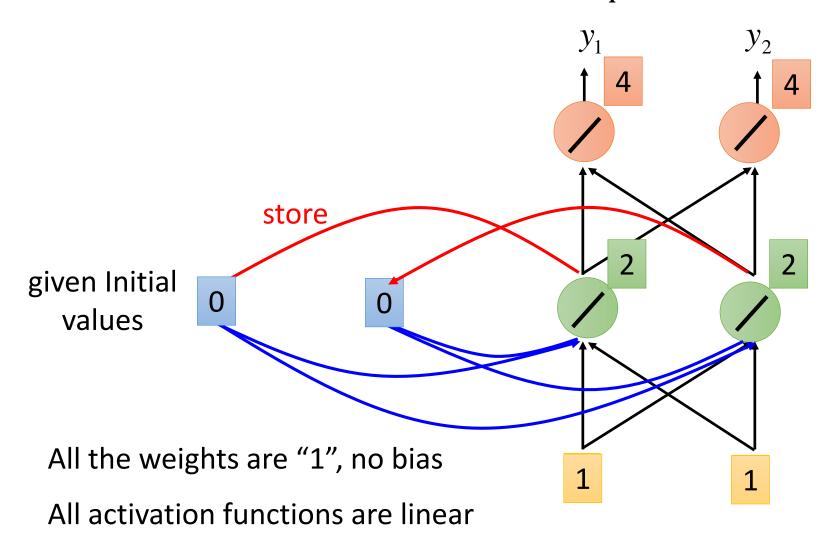

needs memory!

Recurrent Neural Network (RNN)

Input sequence:
$$\begin{bmatrix} 1 \\ 1 \end{bmatrix} \begin{bmatrix} 1 \\ 1 \end{bmatrix} \begin{bmatrix} 2 \\ 2 \end{bmatrix} \dots \dots$$

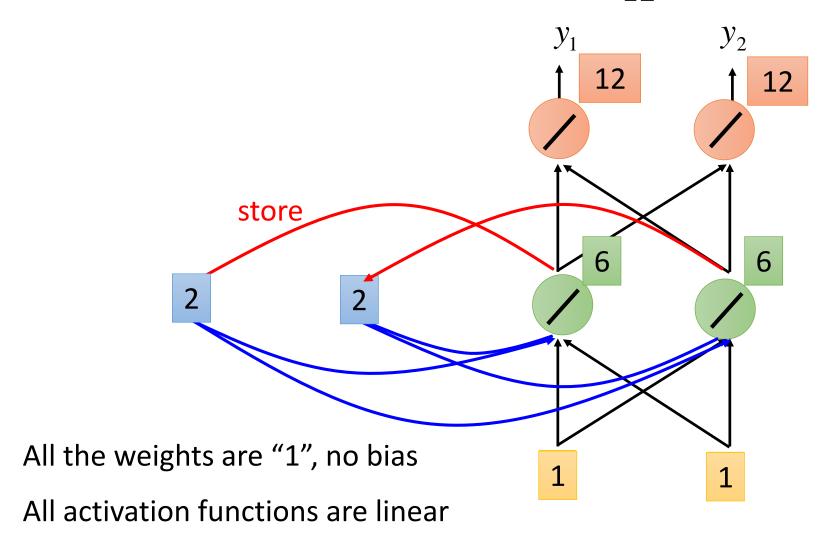

Example output sequence: $\begin{bmatrix} 4 \\ 4 \end{bmatrix}$

Input sequence:
$$\begin{bmatrix} 1 \\ 1 \end{bmatrix} \begin{bmatrix} 1 \\ 1 \end{bmatrix} \begin{bmatrix} 2 \\ 2 \end{bmatrix} \dots \dots$$

Example

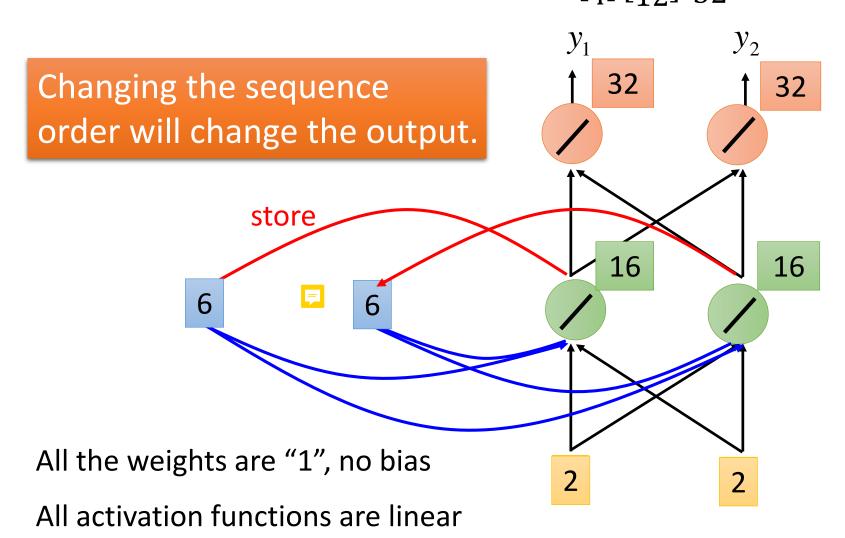

output sequence: $\begin{bmatrix} 4 \\ 4 \end{bmatrix} \begin{bmatrix} 12 \\ 12 \end{bmatrix}$

Input sequence:
$$\begin{bmatrix} 1 \\ 1 \end{bmatrix} \begin{bmatrix} 1 \\ 1 \end{bmatrix} \begin{bmatrix} 2 \\ 2 \end{bmatrix} \dots$$

Example

output sequence: $\begin{bmatrix} 4 \\ 4 \end{bmatrix} \begin{bmatrix} 12 \\ 12 \end{bmatrix} \begin{bmatrix} 32 \\ 32 \end{bmatrix}$

RNN

 $\mathbf{X}^{\mathbf{1}}$

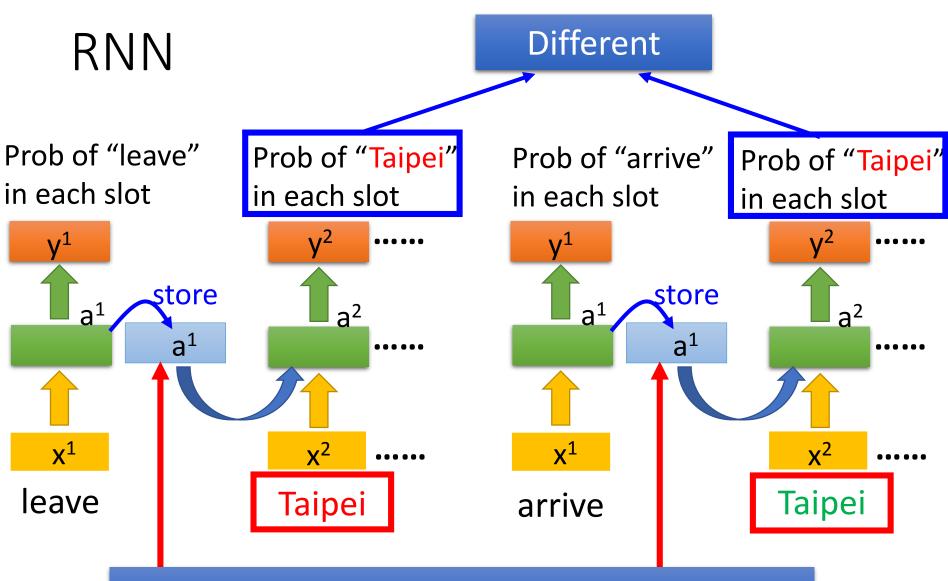

The same network is used again and again.

Probability of Probability of "arrive" in each slot "Taipei" in each slot "on" in each slot "y¹ y² y³ y³ a⁴ a¹ a² a²

arrive Taipei on November 2nd

 x^3

 x^2

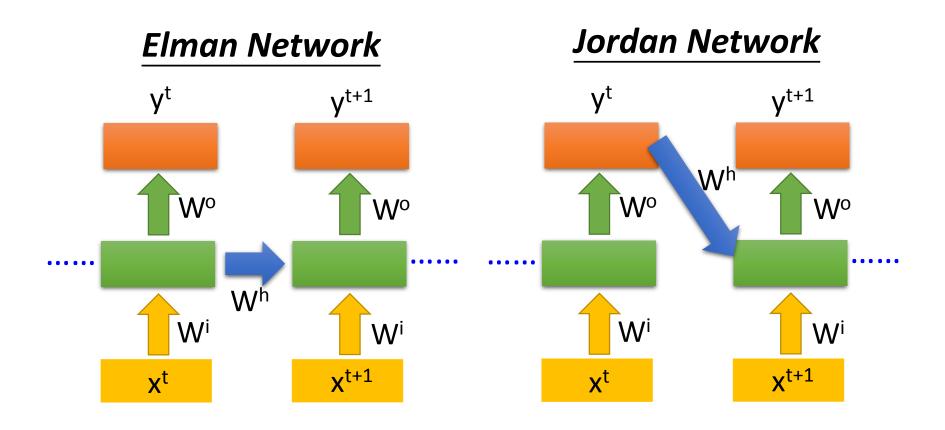

The values stored in the memory is different.

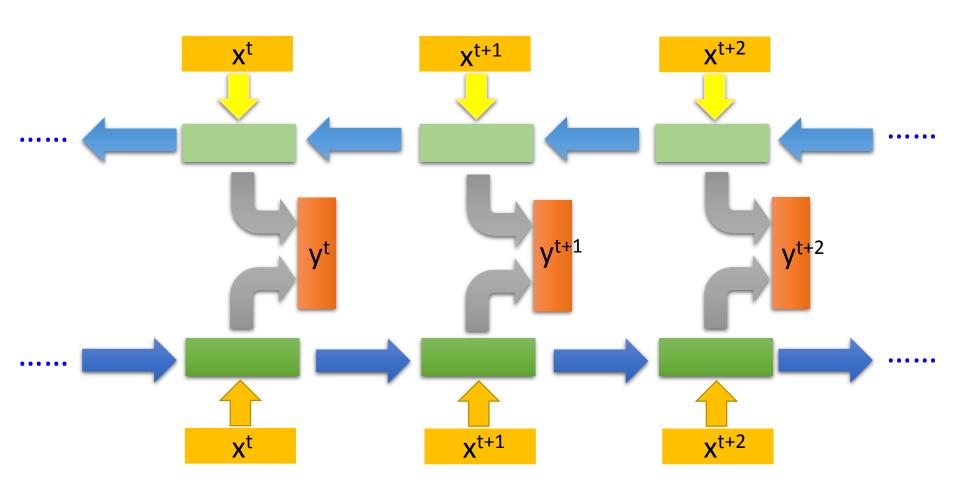

Of course it can be deep ...

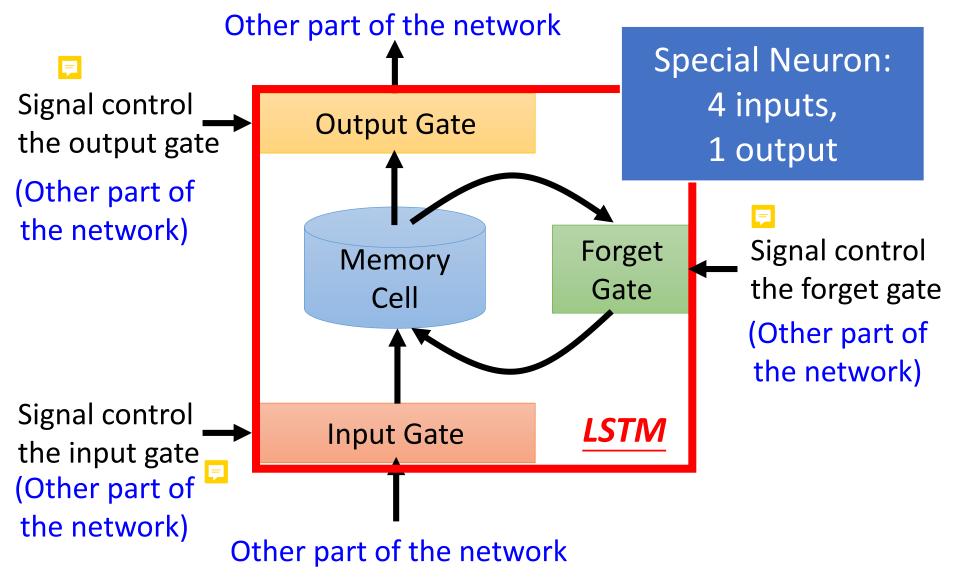

Elman Network & Jordan Network

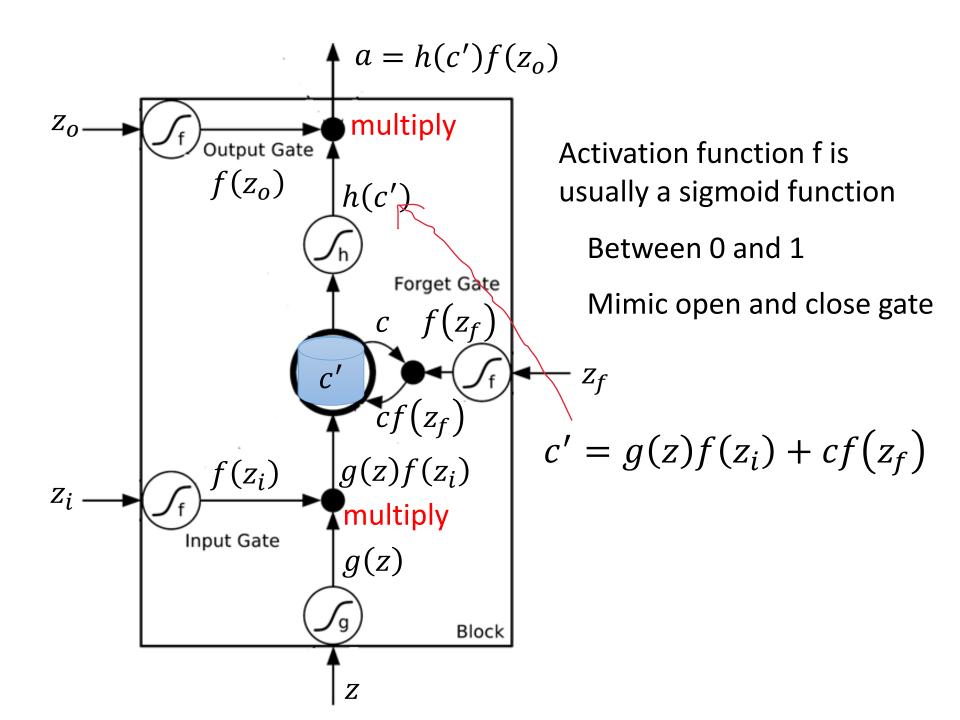

Bidirectional RNN •

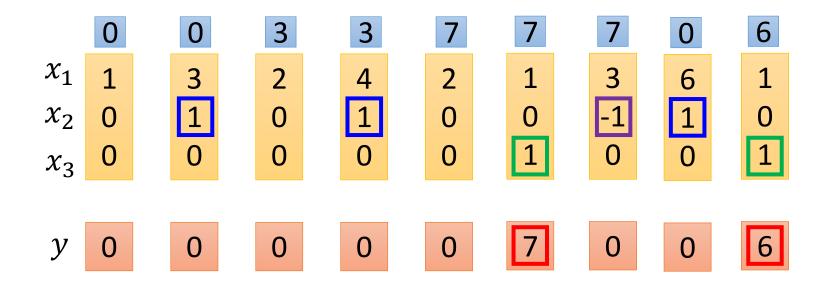

Long Short-term Memory (LSTM)

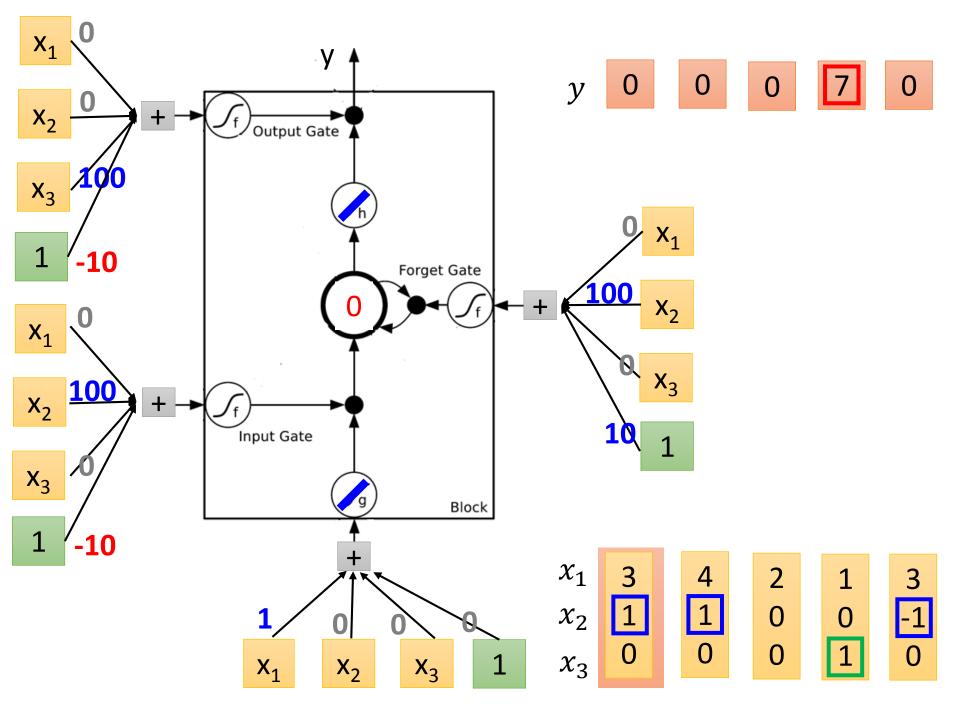

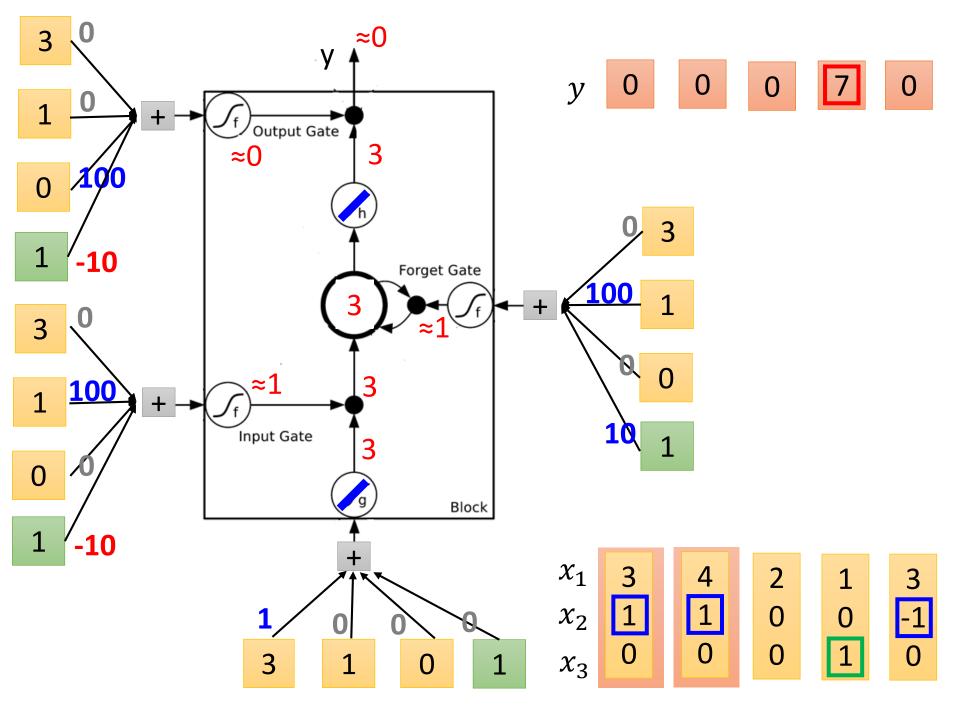

LSTM - Example

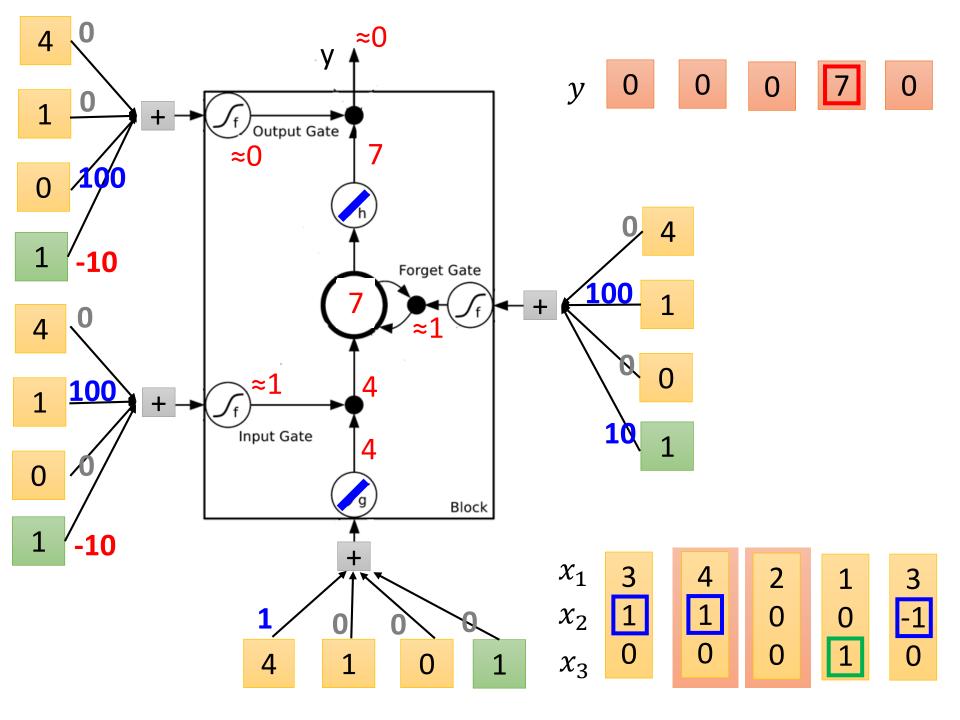

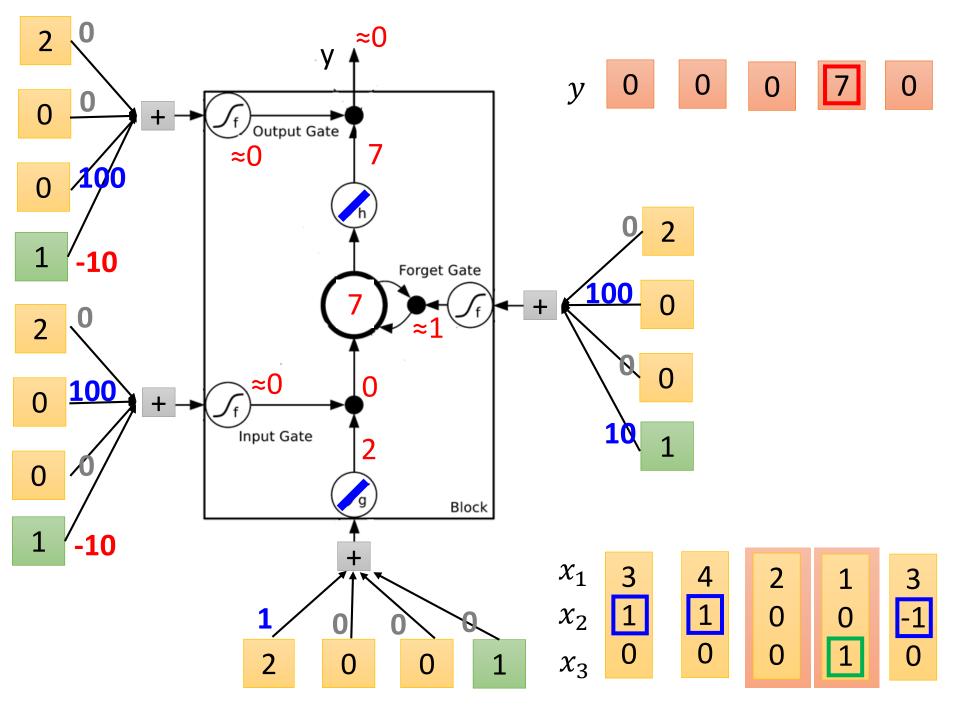

When $x_2 = 1$, add the numbers of x_1 into the memory When $x_2 = -1$, reset the memory

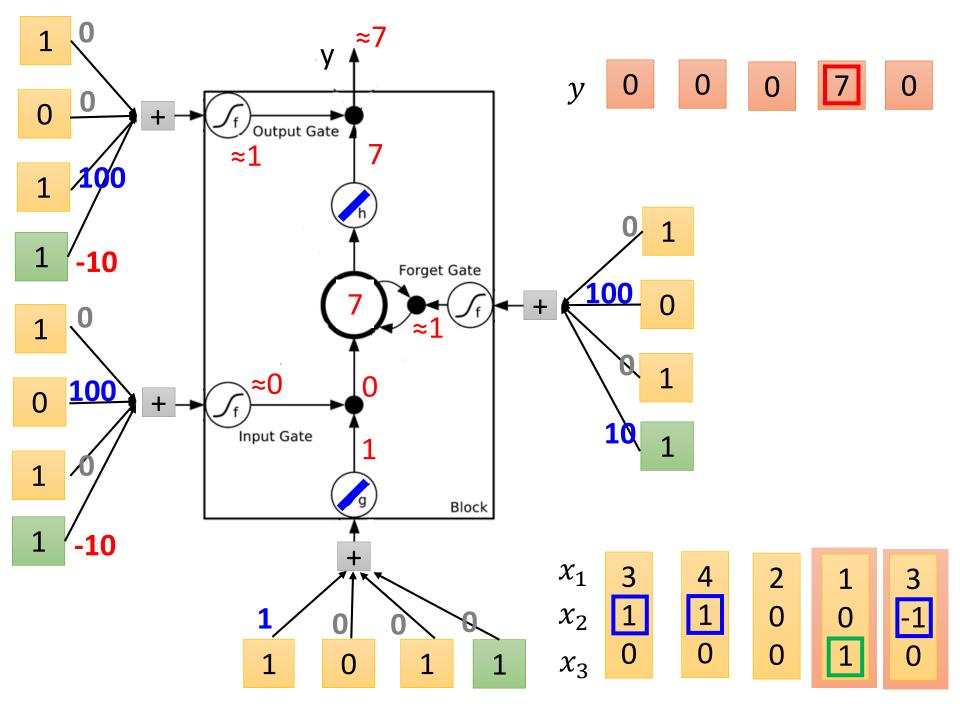

When $x_3 = 1$, output the number in the memory.

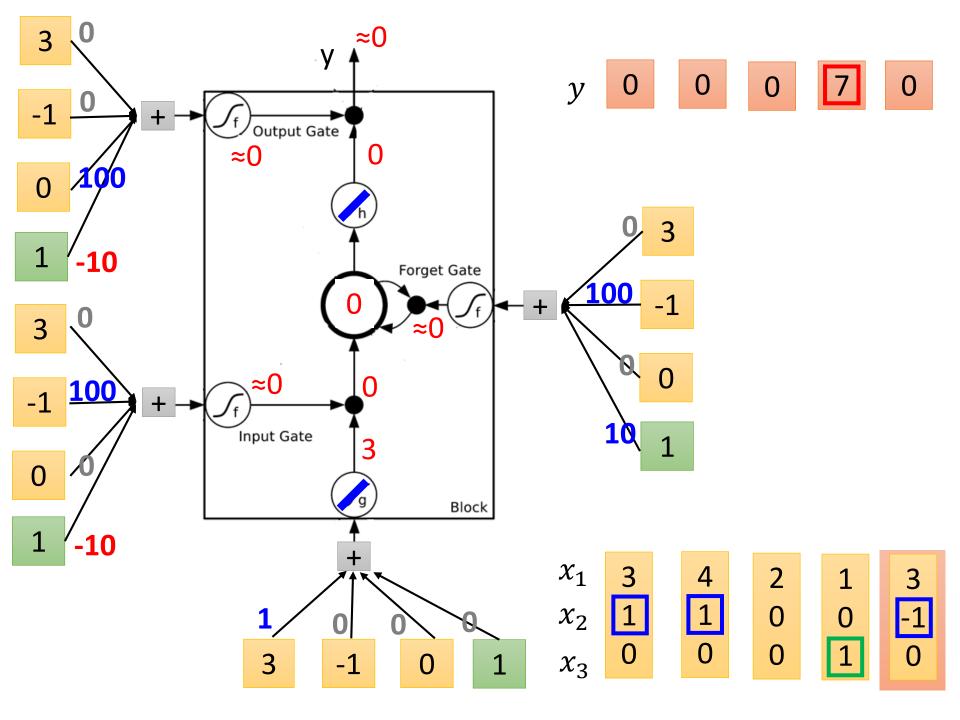

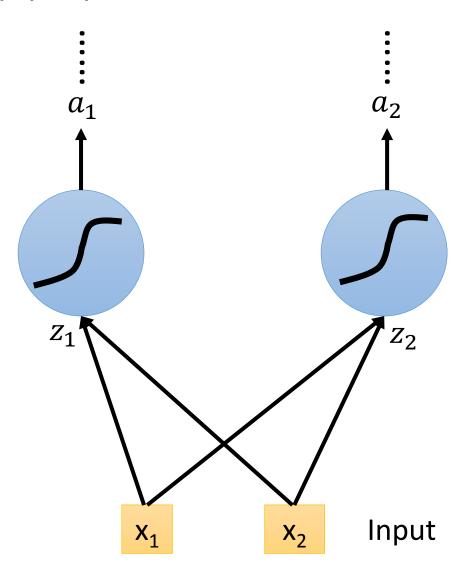

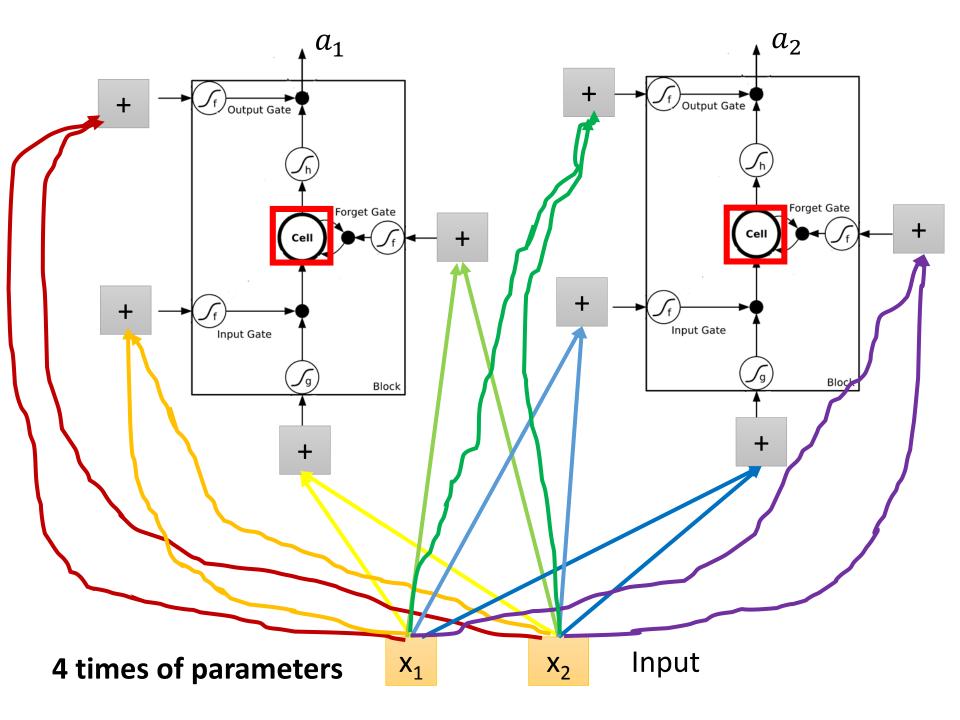

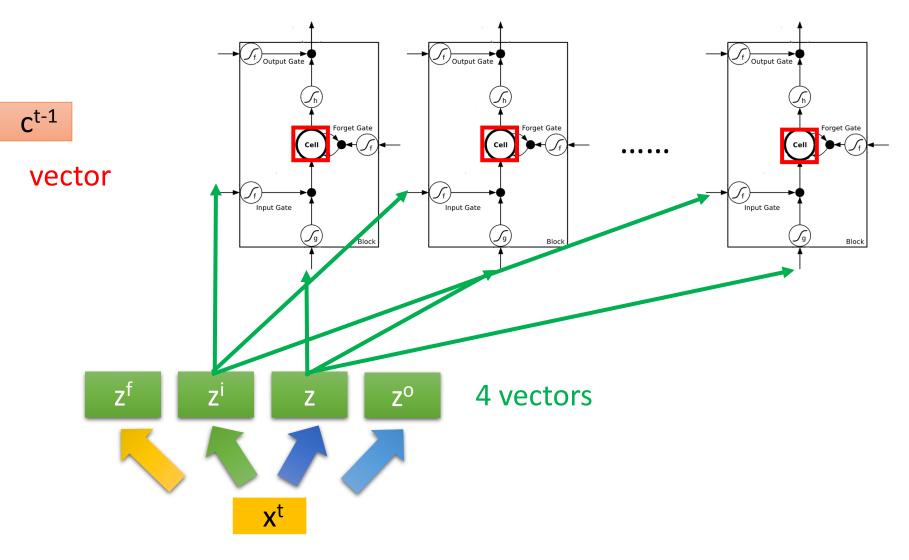

Original Network:

➤ Simply replace the neurons with LSTM

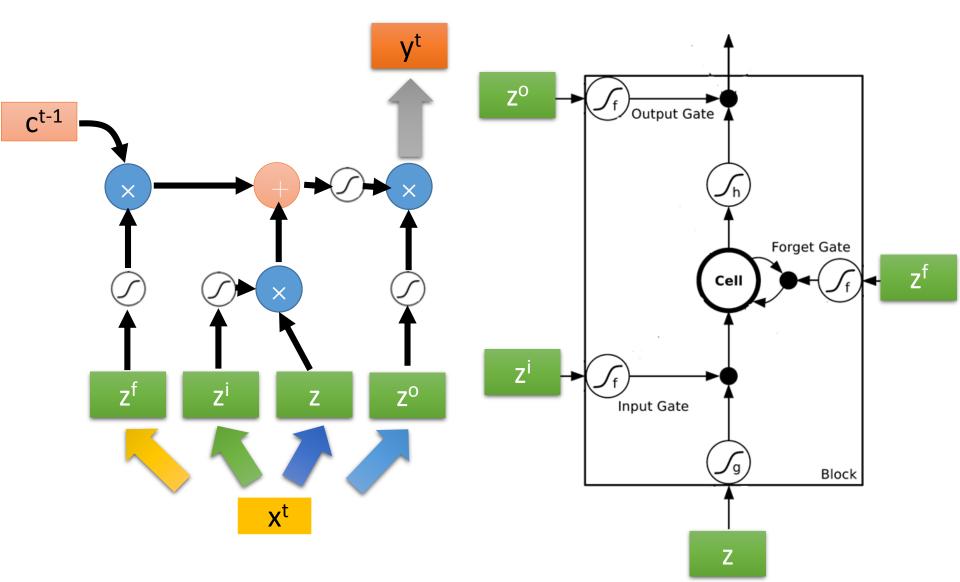

LSTM

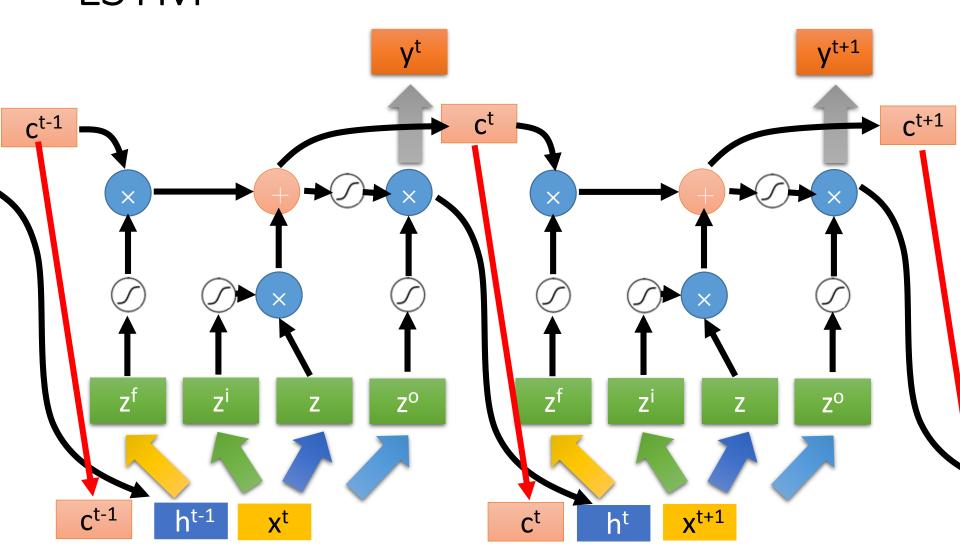

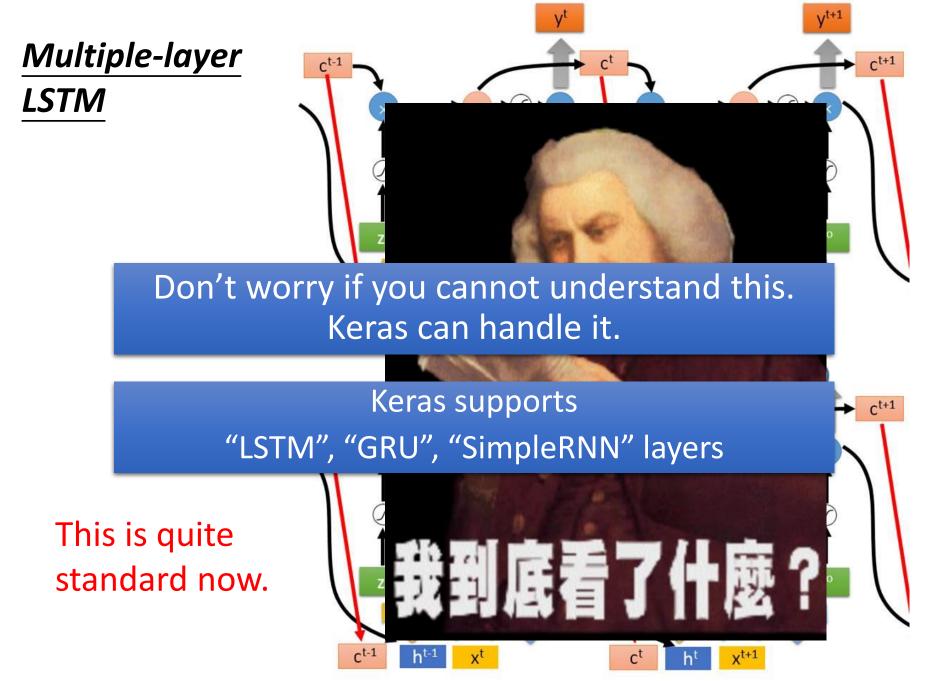

LSTM

LSTM

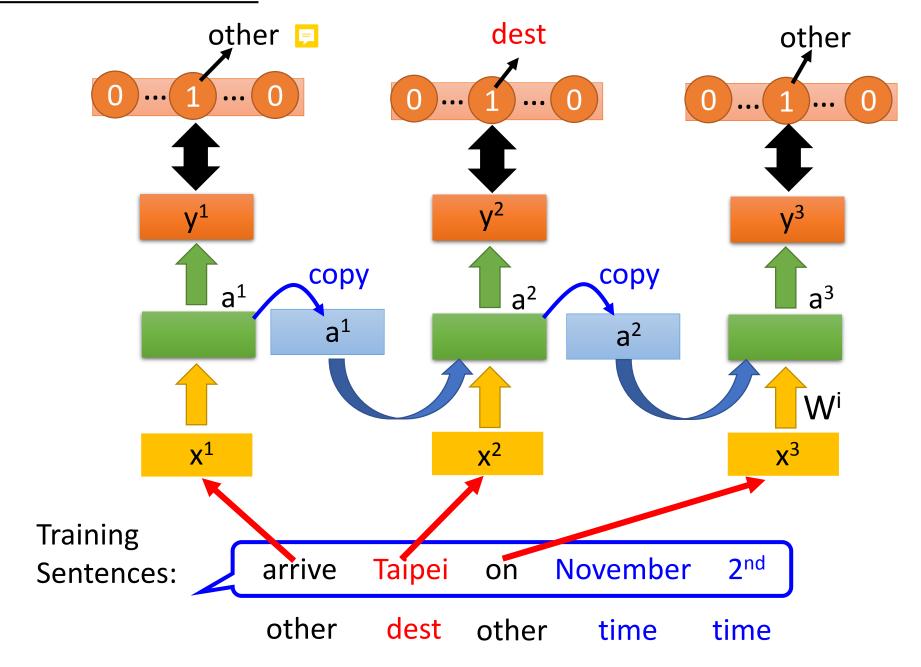

Extension: "peephole"

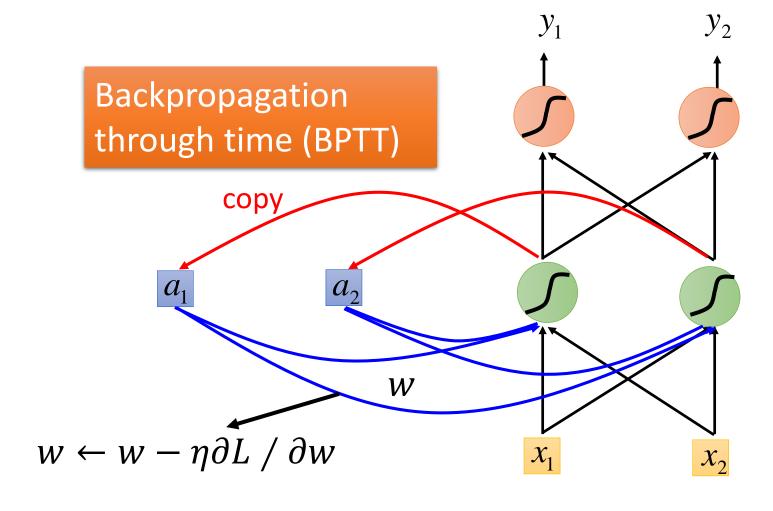

https://img.komicolle.org/2015-09-20/src/14426967627131.gif

Learning Target

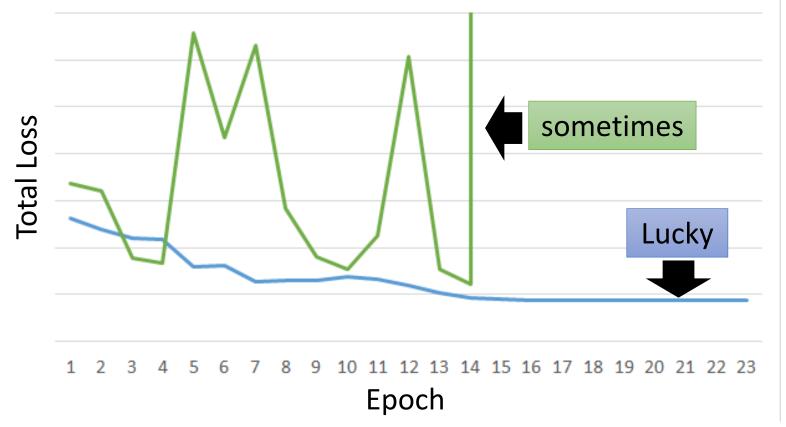

Learning

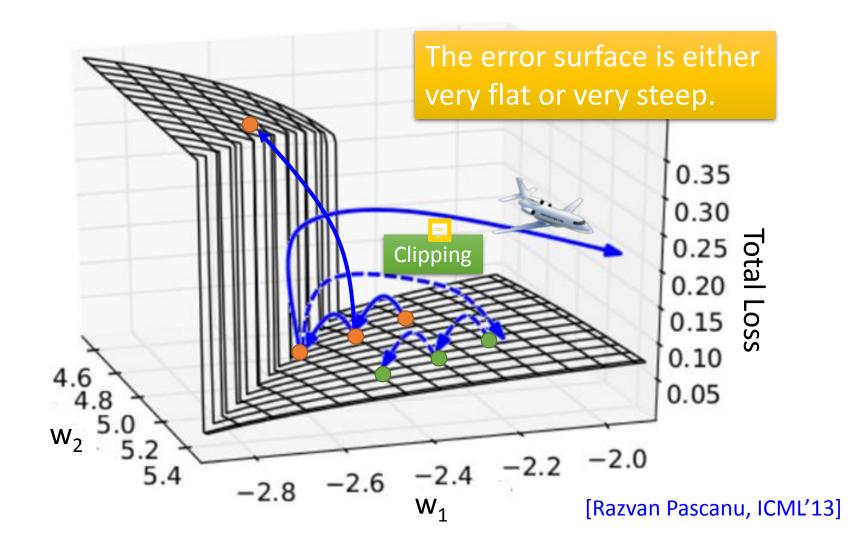

Unfortunately

RNN-based network is not always easy to learn
 Real experiments on Language modeling

The error surface is rough.

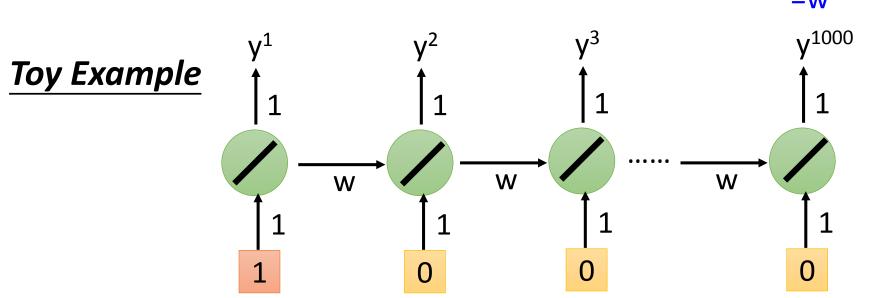

Why?

$$w=1$$
 \Rightarrow $y^{1000}=1$ Large $\partial L/\partial w$ Learning rate?

 $w=0.99$ \Rightarrow $y^{1000}\approx 0$ small $\partial L/\partial w$ Large Learning rate?

 $w=0.01$ \Rightarrow $y^{1000}\approx 0$ \Rightarrow $y^{$

Helpful Techniques

Long Short-term Memory (LSTM)

Can deal with gradient vanishing (not gradient explode)

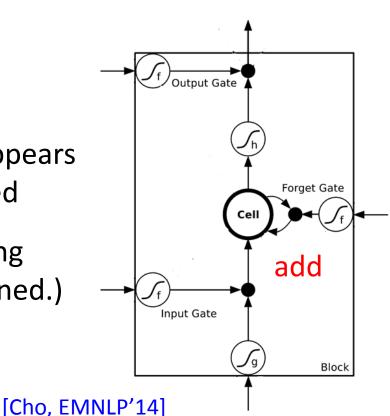

Memory and input are added

➤ The influence never disappears unless forget gate is closed

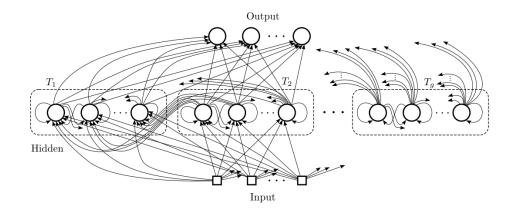

No Gradient vanishing (If forget gate is opened.)

Gated Recurrent Unit (GRU): simpler than LSTM

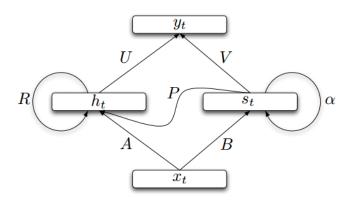

Helpful Techniques

Clockwise RNN

[Jan Koutnik, JMLR'14]

Structurally Constrained Recurrent Network (SCRN)

[Tomas Mikolov, ICLR'15]

Vanilla RNN Initialized with Identity matrix + ReLU activation function [Quoc V. Le, arXiv'15]

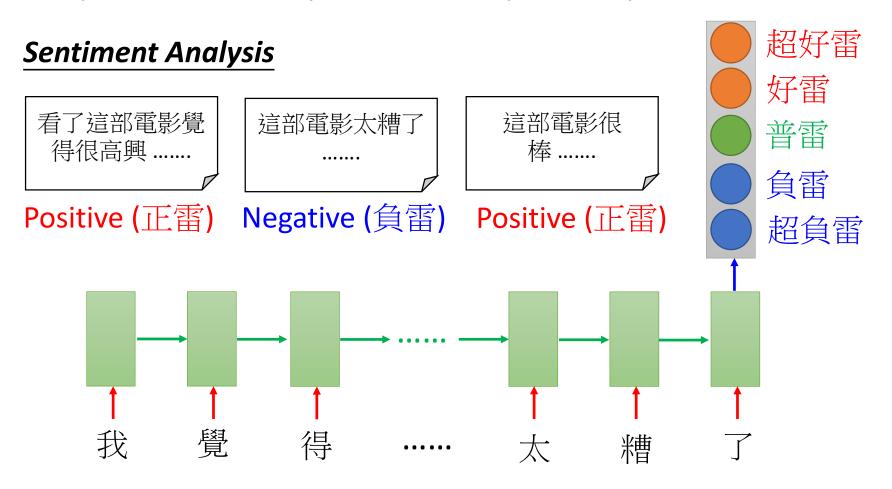

Outperform or be comparable with LSTM in 4 different tasks

More Applications

Probability of Probability of Probability of "arrive" in each slot "Taipei" in each slot "on" in each slot Input and output are both sequences with the same length RNN can do more than that! X^1 arrive November 2nd Taipei

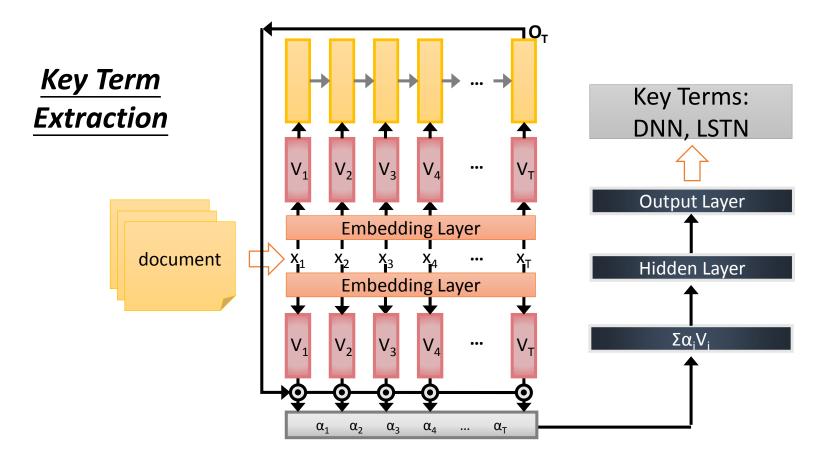

Many to one

Input is a vector sequence, but output is only one vector

Many to one

Input is a vector sequence, but output is only one vector

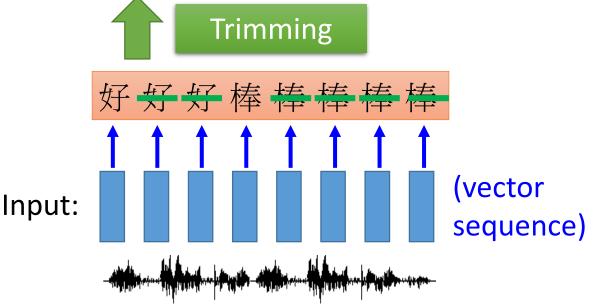

- Both input and output are both sequences, <u>but the output</u> is shorter.
 - E.g. Speech Recognition

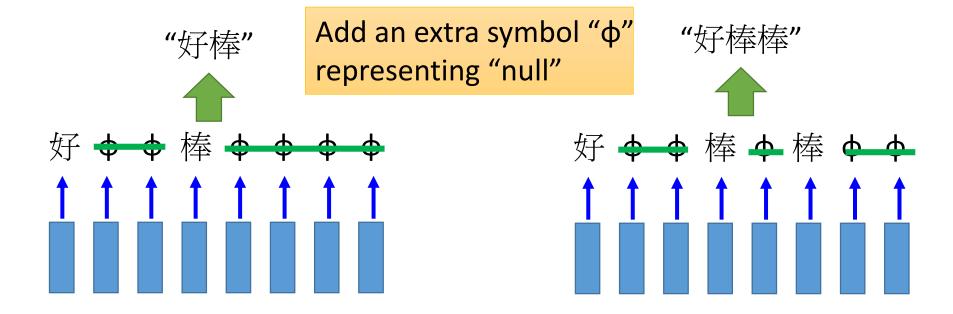

Output: "好棒" (character sequence)

Problem?

Why can't it be "好棒棒"

- Both input and output are both sequences, <u>but the output</u> is shorter.
- Connectionist Temporal Classification (CTC) [Alex Graves, ICML'06][Alex Graves, ICML'14][Haşim Sak, Interspeech'15][Jie Li, Interspeech'15][Andrew Senior, ASRU'15]

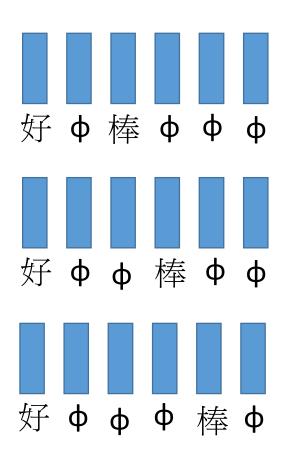

• CTC: Training

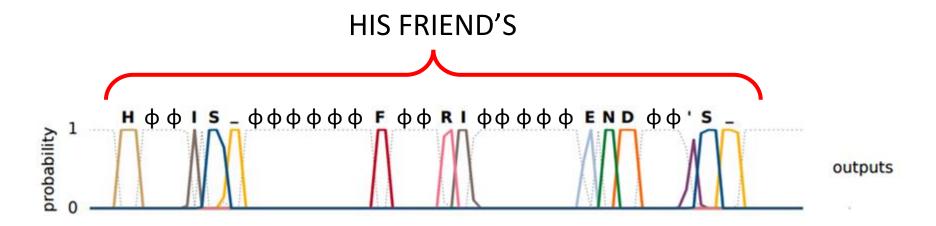

Acoustic Features:

Label: 好棒

All possible alignments are considered as correct.

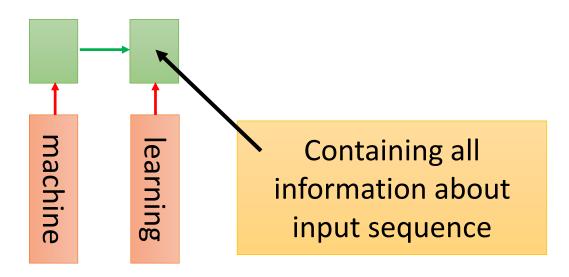

CTC: example

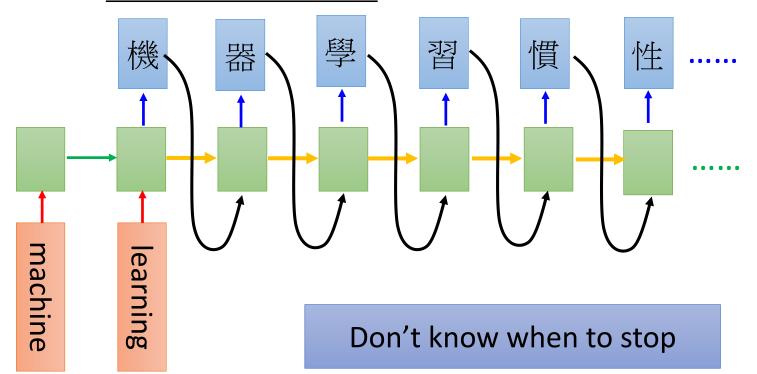

Graves, Alex, and Navdeep Jaitly. "Towards end-to-end speech recognition with recurrent neural networks." *Proceedings of the 31st International Conference on Machine Learning (ICML-14)*. 2014.

- Both input and output are both sequences <u>with different</u> lengths. → Sequence to sequence learning
 - E.g. *Machine Translation* (machine learning→機器學習)

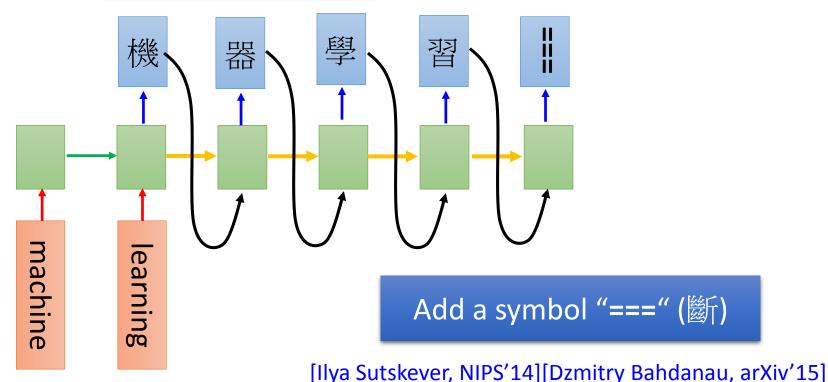

- Both input and output are both sequences <u>with different</u> lengths. → Sequence to sequence learning
 - E.g. *Machine Translation* (machine learning→機器學習)

Reading Comprehension

Reading Comprehension

• End-To-End Memory Networks. S. Sukhbaatar, A. Szlam, J. Weston, R. Fergus. NIPS, 2015.

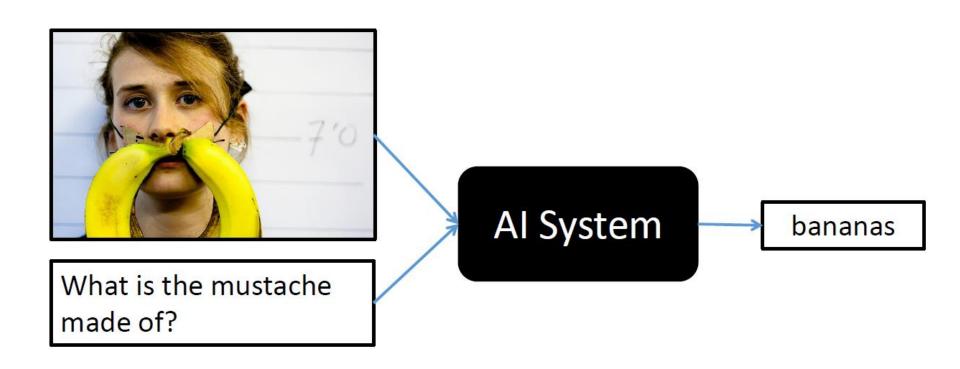

The position of reading head:

Story (16: basic induction)	Support	Hop 1	Hop 2	Hop 3
Brian is a frog.	yes	0.00	0.98	0.00
Lily is gray.		0.07	0.00	0.00
Brian is yellow.	yes	0.07	0.00	1.00
Julius is green.		0.06	0.00	0.00
Greg is a frog.	yes	0.76	0.02	0.00
What color is Greg? Answer: yellow	Prediction: yellow			

Keras has example:

Deep & Structured

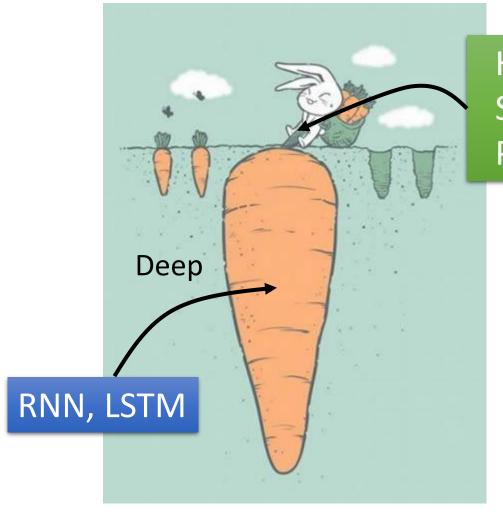

RNN v.s. Structured Learning

- RNN, LSTM
 - Unidirectional RNN does not consider the whole sequence
 - Cost and error not always related
 - Deep 👑

- HMM, CRF, Structured Perceptron/SVM
 - Using Viterbi, so consider the whole sequence
 - How about Bidirectional RNN?
 - Can explicitly consider the label dependency
 - Cost is the upper bound of error

Integrated Together

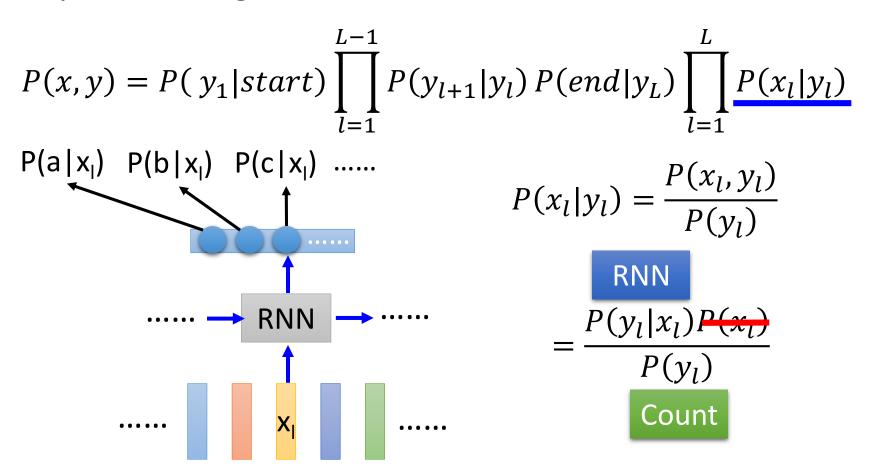

HMM, CRF,
Structured
Perceptron/SVM

- Explicitly model the dependency
- Cost is the upper bound of error

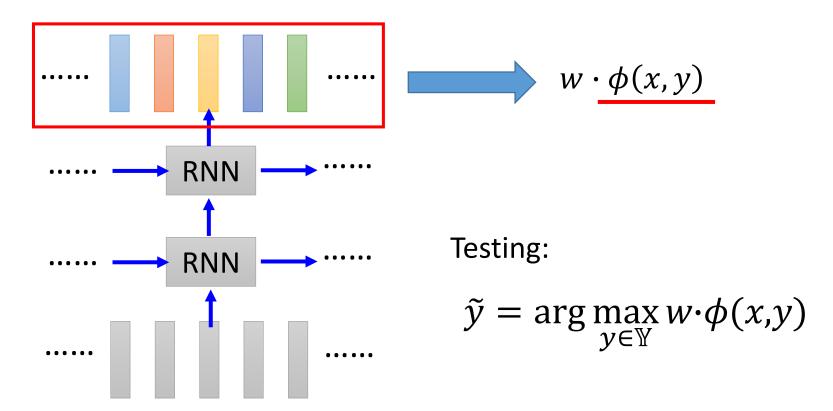

Integrated together

Speech Recognition: CNN/LSTM/DNN + HMM

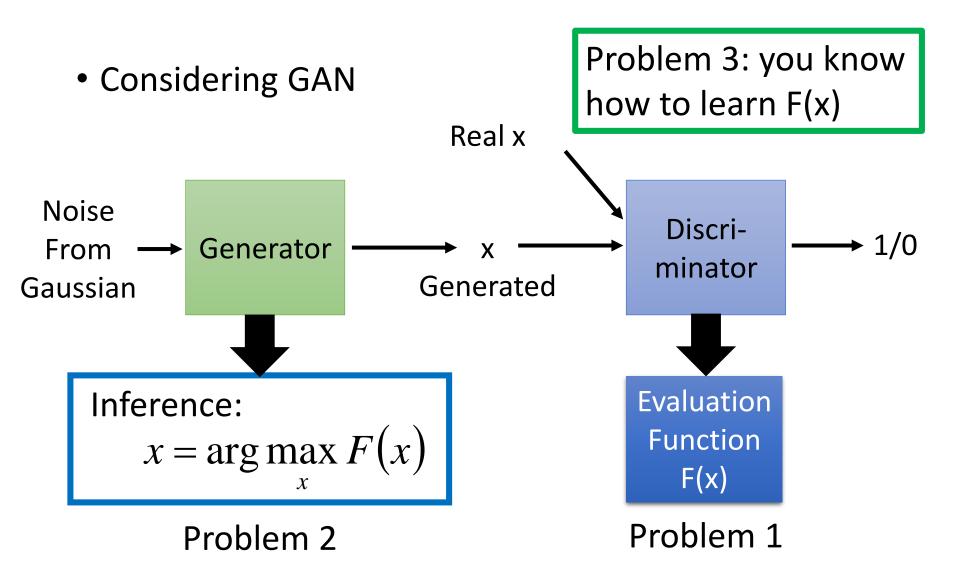

Integrated together

 Semantic Tagging: Bi-directional LSTM + CRF/Structured SVM

Is structured learning practical?

Is structured learning practical?

Sounds crazy? People do think in this way ...

- Connect Energy-based model with GAN:

Machine learning and having it deep and structured (MLDS)

- •和 ML的不同
 - 在這學期 ML 中有提過的內容 (DNN, CNN ...),在 MLDS 中不再重複,只做必要的復習
- 教科書: "Deep Learning" (http://www.deeplearningbook.org/)
 - Part II 是講 deep learning 、 Part III 就是講 structured learning
- Part II: Modern Practical Deep Networks
 - 6 Deep Feedforward Networks
 - 7 Regularization for Deep Learning
 - 8 Optimization for Training Deep Models
 - 9 Convolutional Networks
 - 10 Sequence Modeling: Recurrent and Recu
 - 11 Practical Methodology
 - 12 Applications

- Part III: Deep Learning Research
 - 13 Linear Factor Models
 - 14 Autoencoders
 - 15 Representation Learning
 - 16 Structured Probabilistic Models for Deep Learning
 - 17 Monte Carlo Methods
 - 18 Confronting the Partition Function
 - 19 Approximate Inference
 - 20 Deep Generative Models

Machine learning and having it deep and structured (MLDS)

- 所有作業都 2~4 人一組,可以先組好隊後一起來修
- MLDS 的作業和之前不同
 - RNN (把之前 MLDS 的三個作業合為一個)、Attention-based model、Deep Reinforcement Learning、Deep Generative Model、Sequence-to-sequence learning
- MLDS 初選不開放加簽,以組為單位加簽,作業0的內容是做一個 DNN (可用現成套件)
